PBS

Psoriatic arthritis – initial authority application

When to use this form

Use this form to apply for **initial** PBS-subsidised biological medicines for patients 18 years or over with severe psoriatic arthritis.

Important information

Initial applications to start PBS-subsidised treatment must be in writing and must include sufficient information to determine the patient's eligibility according to the PBS criteria.

Applications for **balance of supply** can be made in real time using the **Online PBS Authorities** system or by phone. Call 1800 700 270 Monday to Friday, 8 am to 5 pm, local time.

Under no circumstances will phone approvals be granted for psoriatic arthritis **initial** authority applications.

Where the term 'biological medicine' appears, it refers to adalimumab, bimekizumab, certolizumab pegol, etanercept, golimumab, guselkumab, infliximab, ixekizumab, risankizumab, secukinumab, tofacitinib, upadacitinib and ustekinumab. Patients are eligible for PBS-subsidised treatment with only one biological medicine at any time.

The information in this form is correct at the time of publishing and may be subject to change.

Continuing treatment

This form is ONLY for **initial** treatment.

After a written authority application for the **first continuing** treatment has been approved, **subsequent continuing** treatments with PBS-subsidised biosimilar brands of biological medicines are **Authority Required (STREAMLINED)** and do not require authority approval from Services Australia for the listed quantity and repeats.

Section 100 arrangements for infliximab i.v.

This item is available to a patient who is attending:

- an approved private hospital, **or**
- a public hospital

and is a:

- day admitted patient
- non-admitted patient, **or**
- patient on discharge.

This item is not available as a PBS benefit for in-patients of a public hospital.

The hospital name and provider number must be included in this authority form.

Treatment specifics

The assessment of the patient's response to the course of treatment must be conducted within the time frame specified in the restriction. Where a demonstration of response is not conducted within the required time frame, the patient will be deemed to have failed treatment with that particular PBS-subsidised biological medicine.

A patient who has experienced a serious adverse reaction of a severity necessitating permanent treatment withdrawal is not considered to have failed treatment with that particular PBS-subsidised biological medicine.

12 The patient:

☐ has not received PBS-subsidised treatment with a biological medicine for this condition

and

☐ has failed to achieve an adequate response following a minimum of 3 months treatment with:

☐ methotrexate, at a dose of at least 20 mg/week

From (DD MM YYYY)

To (DD MM YYYY)

and

☐ sulfasalazine, at a dose of at least 2 g/day

From (DD MM YYYY)

To (DD MM YYYY)

or

☐ leflunomide, at a dose up to 20 mg/day

From (DD MM YYYY)

To (DD MM YYYY)

13 If applicable, provide details of contraindications or intolerance to prior disease-modifying anti-rheumatic drugs (DMARD) treatment, including the degree of toxicity.

For details of the toxicity criteria, go to **servicesaustralia.gov.au/healthprofessionals**

Intolerance must be of a severity to necessitate permanent treatment withdrawal.

Prior therapy contraindication or toxicity and grade

Methotrexate	Grade

Sulfasalazine	Grade

Leflunomide	Grade

14 The patient has failed to achieve an adequate response to prior DMARD treatment demonstrated by:

☐ an elevated erythrocyte sedimentation rate (ESR) > 25 mm/hr

Baseline ESR level mm/hr

Date of test (DD MM YYYY)

and/or

☐ an elevated C-reactive protein (CRP) > 15 mg/L

Baseline CRP level mg/L

Date of test (DD MM YYYY)

or

☐ the requirement to demonstrate an elevated ESR or CRP could not be met due to

☐ treatment with prednisolone dosed at 7.5mg or higher daily (or equivalent)

or

☐ treatment with a parenteral steroid within the past month (intramuscular or intravenous methylprednisolone or equivalent)

or

☐ provide an acceptable reason the patient could not demonstrate an elevated ESR or CRP level

and

☐ an active joint count of at least 20 active (swollen and tender) joints

Baseline total active joint count

Date of assessment (DD MM YYYY)

or

☐ at least 4 active major joints from elbow, wrist, knee, ankle, shoulder and/or hip

Baseline major joint count

Date of assessment (DD MM YYYY)

The baseline joint count and ESR and/or CRP level must be determined at the completion of the 3-month DMARD trial, but prior to ceasing DMARD therapy.

All measures must be **no more than 4 weeks old** at the time of initial application.

Where only one marker (ESR or CRP) has been provided at baseline, the same marker must be used for assessment for all continuing applications.

Where a patient has at least 4 active major joints and less than 20 total active joints at baseline, assessment of the major joints only will be used for all continuing applications.
