

# Psoriatic arthritis – bimekizumab or risankizumab – initial grandfather authority application

## When to use this form

Use this form to apply for **initial grandfather** PBS-subsidised bimekizumab or risankizumab for patients 18 years or over with severe psoriatic arthritis who have received non-PBS-subsidised treatment for the same condition with **bimekizumab** prior to **1 October 2024** or **risankizumab** prior to **1 March 2025**.

## Important information

**Initial grandfather** applications to start PBS-subsidised treatment must be in writing and must include sufficient information to determine the patient's eligibility according to the PBS criteria.

Under no circumstances will phone approvals be granted for psoriatic arthritis **initial grandfather** authority applications.

The information in this form is correct at the time of publishing and may be subject to change.

## Continuing treatment

This form is ONLY for **initial grandfather** treatment.

A patient may only qualify for PBS-subsidised treatment under this restriction once in a lifetime.

For **continuing** PBS-subsidised treatment, a grandfathered patient must qualify under the continuing treatment criteria.

## Treatment specifics

The assessment of the patient's response to the course of treatment must be conducted within the time frame specified in the restriction. Where a demonstration of response is not conducted within the required time frame, the patient will be deemed to have failed treatment with that particular PBS-subsidised biological medicine.

A patient who has experienced a serious adverse reaction of a severity necessitating permanent treatment withdrawal is not considered to have failed treatment with that particular PBS-subsidised biological medicine.

The baseline joint count and ESR or CRP level must have been determined at the completion of the 3-month DMARD trial, but prior to ceasing DMARD therapy.

All measurements must have been **no more than 4 weeks old** at the time of initiating non-PBS-subsidised treatment with this drug for this condition.

Where only one marker (ESR or CRP) has been provided at baseline, the same marker must be used for assessment for all continuing applications.

Where a patient has at least 4 active major joints and less than 20 total active joints at baseline, assessment of the major joints only will be used for all continuing applications.

**14** Has the patient received non-PBS-subsidised treatment with this drug for this condition for at least 12 weeks?

No ☐ **Go to 16**

Yes ☐ **Go to 15**

**15** The patient has demonstrated an adequate response to treatment evidenced by:

- ☐ an ESR level  $\leq$  25 mm/hr or reduced by at least 20% from baseline

Current ESR level  mm/hr

Date of test (no more than 4 weeks old) (DD MM YYYY)
